Project Publications

[Perceptual Image Super Resolution Using Deep Learning and Super Resolution Convolution Neural Networks (SRCNN)](#)

- The main objective of Perceptual Image Super Resolution is to obtain a high resolution image from a normal low resolution image.
- The task is very simple that we just want to make a Low firmness appearance into an extraordinary resolution image.
- This method was a quite simple one in which we take a low determination image as input and place in a convolution neural network (CNN) and produce a high resolution image as the output.
- In this technique the edges will be clearly defined, but the whole image will be blurred. This method is unable to produce good-looking textures.
- Has attained the accuracy of 91.3% of the image from low to high conversion accuracy.
